

PILOT AIR GAS MIXERS

MODEL: **PM**

BULLETIN: 402

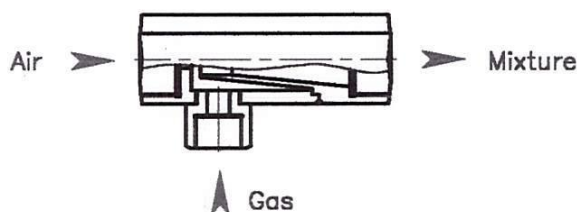

Page 1 of 1

This venturi type mixer produces a suitable and continuous mixture with maximum pressure of 50 mbar, while it works with a maximum air pressure of 100 mbar.

The air emits from the nozzle with pressure and by causing vacuum, puffs the gas to the mixing tube with a lower pressure.

Two adjustable valves are used for adjustment of the fuel-air ratio as well as the mixture pressure.

Mixer Model	Max. mixture capacity(Kcal/hr)
PM3	5,000
PM4	10,000
PM6	20,000
PM8	30,000
PM10	40,000
